

What is claimed is:

1. A website browsing system, comprising:  
a communication network;  
a wireless base station connected to said  
5 communication network;  
a website, making available image data via said  
communication network;  
a facsimile connectable via a telephone line; and  
a portable terminal, connectable to said  
10 communication network via said base station, and which,  
after completion of a connection operation with respect  
to said communication network in response to a user  
instruction, converts said image data made available from  
said website to data for facsimile communication, and  
15 sends said facsimile communication data via the telephone  
line to said facsimile.

2. A website browsing system, comprising:  
a communication network;  
a wireless base station connected to said  
20 communication network;  
a website, making available image data via said  
communication network;  
a facsimile connectable via a telephone line;  
a service center, connectable to said communication  
25 network, which sends received facsimile communication  
data to said facsimile via the telephone line; and  
a portable terminal, connectable to said  
communication network via said base station, which,  
during connection to said communication network, in

accordance with an instruction from a user, converts said image data made available from said website to facsimile communication data, and sends said facsimile communication data via said communication network to said service center.

5           3. A website browsing system, comprising:

          a communication network;

          a wireless base station connected to said communication network;

10           a website, making available image data via said communication network;

          a facsimile connectable via a telephone line;

          a service center, connectable to said communication network, which accesses said website, in accordance with

15           a received URL of said received website, converts image data made available from said website to facsimile communication data, and sends said facsimile communication data to a received telephone number of said facsimile in accordance with the received telephone number of said facsimile; and

20           a portable terminal, connectable to said communication network via said base station, which, after completion of a connection to said communication network, in accordance with an instruction from a user, sends a

25           URL of said website and a telephone number of said facsimile to said service center.

4. A website browsing system, comprising:

          a communication network;

a wireless base station connected to said communication network;

a website, making available image data via said communication network;

5 a facsimile connectable via a telephone line;

a service center, connectable to said communication network, which accesses said website, in accordance with a received URL of said website, converts image data made available from said website to facsimile communication 10 data, and sends said facsimile communication data to a facsimile with a received telephone number of said facsimile; and

a portable terminal, connectable to said communication network via said base station, which, 15 during connection to said communication network, in accordance with an instruction from a user, sends a URL of said website and a telephone number of said facsimile to said service center.

5. A website browsing system, comprising:

20 a communication network;

a wireless base station connected to said communication network;

a website, making available image data via said communication network;

25 a facsimile connectable to said communication network and to a telephone line, which in a case in which a priory specified URL of said website is sent from a predetermined URL transfer terminal, in accordance with said URL, accesses said website, receives said image data

from said website, converts said image data to facsimile communication data, and outputs said data; and

5 a portable terminal, connectable to said communication network via said base station, which sends a URL of said website selected by a user to said facsimile via said telephone line.

6. A website browsing system, comprising:

a communication network;

10 a wireless base station connected to said communication network;

a website, making available image data via said communication network;

a facsimile connectable to said communication network and to a telephone line, which in a case in which 15 a subject of an electronic mail sent thereto is a URL of said website, accesses said website in accordance with said URL, receives said image data from said website, converts said image data to facsimile communication data, and outputs said data; and

20 a portable terminal, connectable to said communication network via said base station, which sends a URL of said website selected by a user as a subject of an electronic mail to said facsimile.

7. A website browsing system, comprising:

25 a communication network;

a wireless base station connected to said communication network;

a website, making available image data via said communication network;

a facsimile connectable to said communication network;

5 a service center connectable to said communication network, which in a case in which a subject of a sent electronic mail is the URL of said website, accesses said website in accordance with said URL, receives image data from said website, converts said image data to facsimile communication data, and sends said facsimile communication data to said facsimile; and

10 a portable terminal, connectable to said communication network via said base station, which sends a URL of said website selected by a user as a subject of an electronic mail to said service center.

15 8. A portable terminal connectable via a base station to a communication network, which can convert image data made available from said website on said communication network to facsimile communication data.

20 9. A network server serving as a service center and being connectable to a communication network, which accesses a website on said communication network in accordance with a URL of said website, converts image data made available by said website to facsimile communication data, and sends said facsimile communication data to a facsimile via a telephone line.

25 10. A facsimile connectable to a communication network and to a telephone line, which in a case in which a URL of a website is sent from a pre-specified URL transfer terminal, accesses said website in accordance

with said URL, receives image data from said website, and converts said image data to facsimile communication data.
